

Gloving

For sterile gloves resolves left and right hand.

1.pic. Open'd package with sterile surgical gloves, whom resolves left and right wrist.

With left hand carefully must be taken right hands glove and need's to be put on right hands forearm.

2. att. Right hand glove should be put on the right hand forearm.

With one movement gloves need to be put above wrist joint. The same process repeats with left hand's glove. Gloves need to be pulled up to fingers, but gloves can be put in order only when both hands are gloved.

N.B. Sterile hands always keep up chest height, holding hands together!
